Overall Rank

California is now ranked #30 in overall education freedom, down four spots from 2023. The state is among the bottom 10 for education choice and teacher freedom.

Education Choice Rank

California ranks 41st for **education choice**, down one spot since 2023. California does fairly well in empowering families to choose among charter and district schools but could do much more to expand private education choice. Additionally, California generally respects the autonomy of homeschooling families. California could improve its ranking by enacting a K-12 education savings account (ESA) policy and making it easier for more charter schools to open and operate.

Transparency Rank

California ranks fourth in **academic transparency**, but lawmakers adopted a law after the cut-off date for the data gathering on this report that severely impairs transparency. The new provision prohibits schools from adopting policies that require educators to inform parents when children express confusion about their sex (the score change will be reflected in next year's report). Furthermore, California lawmakers have neither adopted proposals that reject the prejudice caused by the application of critical race theory in schools, nor addressed the threats to minor-age children from the teaching of "gender" in place of biological sex.

While California law¹ allows parents to "examine the curriculum materials of the class or classes in which their child is enrolled," lawmakers should make this provision more specific to include homework assignments and materials (such as worksheets and videos) that the teacher chooses to add to the curriculum.

Teacher Freedom Rank

The Golden State has an unfriendly environment for fostering **teacher freedom**, ranking 46th among states. Although about 24 percent of its teachers made their way to the classroom through alternative teacher certification programs, that is where the good news ends. California does not allow full reciprocity of licensure for out-of-state teachers, 44 percent of its school districts with more than 15,000 students have "chief diversity officers," and the state still uses Common Core-aligned tests. Educators in California are required to pass the Praxis test, a teacher certification exam administered by the Educational Testing Service. To improve the state's teacher freedom score, state policymakers should allow full reciprocity of teacher licensure, or end certification requirements altogether, end the practice of hiring chief diversity officers, and exit the Common Core national tests.

Return on Investment Rank

California ranks 15th for **return on investment (ROI)** in education spending. California spends the 33rd-most per pupil among states, spending \$15,172 in cost-of-living-adjusted terms annually. California ranks 37th in its combined fourth-grade and eighth-grade math and reading average NAEP score. The Golden State employs 2.35 teachers for every non-teacher in its public schools. California's unfunded teacher pension liability represents 8.6 percent of its state GDP. California can improve its ROI ranking by lowering per-pupil spending, improving academic outcomes on the NAEP, and addressing its unfunded teacher pension liabilities.
